

Baekmuk Gulim (gulim.ttf from baekmuk-ttf-2.2)

This Korean sans font covers English, Dutch, and Korean. It has the Russian alphabet, but the letters are too—widely spaced to be usable. Its Greek letters are slanted, like italics, and lack any accented letters.

For variations of the Latin alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using X<sub>Y</sub>TEX and fontspec. Depending on the font, missing glyphs will be replaced either by nothing at all (occasional fonts do that), a blank space, an empty box, or some other symbol indicating a missing glyph.

This font only has a regular weight in a normal face.

This font does not support Korean Hangul—Hanja mixed script, which can still be used in personal names and in signs for place names. i.e. not all my test codepoints are rendered.

This font lacks the OpenType tag 'hani' needed to use polyglossia for CJK scripts.

## 1 Latin Alphabet (European variants)

### 1.1 Dutch

As well as the standard 26 letters, the IJ digraph IJ ij may be encountered.

Alle mensen worden vrij en gelijk in waardigheid en rechten geboren. Zij zijn begiftigd met verstand en geweten, en behoren zich jegens elkander in een geest van broederschap te gedragen.

## 2 CJK scripts

### 2.1 Korean

모든 인간은 태어날 때부터 자유로우며 그 존엄과 권리에 있어 동등하다. 인간은 천부적으로 이성과 양심을 부여받았으며 서로 형제애의 정신으로 행동하여야 한다.

### 3 Quotation—marks, etc.

In real—world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "...". but in good text there are variations and this font supports:

left and right single quotes ‘ ... ’	angle quotes <...>
left and right double quotes “ ... ”	corner brackets 「 ... 」
single turned comma, ’	white corner brackets 『 ... 』
right single quote ’ ... ’	

### 4 Symbols

#### 4.1 Currency Symbols

Many countries have symbols for their currencies. In alphabetic order:

Cedi (Ghana)	Manat (Azerbaijan)
Cent (many places)	Naira (Nigeria)
Colon (Costa Rica, El Salvador)	Pound Sterling
Cruzeiro (Brazil)	Rouble (Russia)
\$ Dollar (many places)	Tenge (Kazakhstan)
Dong (Vietnam)	Turkish Lira
Euro	Won (Korea)
Hryvnia (Ukraine)	Yen (Japan)

#### 4.2 Other symbols in text
