

NanumGothic (NanumGothic.ttf from NanumFont_TTF_ALL)

This korean font covers English, Dutch (including the ij glyphs) and Spanish, and it has some accented letters for other European latin languages - but not complete coverage for any of them. In the cyrillic alphabet it only covers Russian. It also covers korean (of course) and Traditional Chinese. For variations of the latin, cyrillic, and greek alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using Xe_{La}TeX and fontspec. Depending on the font, missing glyphs will be replaced either by nothing at all (occasional fonts do that), a blank space, an empty box, or some other symbol indicating a missing glyph.

4 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use ‘...’ or ”...” but in good text there are variations and this font supports:

left and right single quotes ‘...’ and for traditional chinese and
left and right double quotes “...” japanese
single turned comma, right single corner brackets 「...」and
quote ‘...’ white corner brackets『...』
guillemets «...» and angle quotes
<...>

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
