

Sawarabi Gothic sawarabi-gothic-medium.ttf 20161015

This Japanese font covers European languages written in Latin alphabets, Russian, and the Lingala language.

This font contains 4,494 kanji glyphs, which would give poor coverage of Chinese text but is sufficient for most current Japanese text.

For variations of the Latin and Cyrillicalphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using X_YT_EX and fontspec. Depending on the font, missing glyphs will be replaced either by nothing at all (occasional fonts do that), a blank space, an empty box, or some other symbol indicating a missing glyph.

This font has only a medium weight in normal style.

This font lacks the OpenType tag 'cyril' needed to use polyglossia for Cyrillic scripts.

4 Other variants of the Latin alphabet

There are many more variations of the Latin alphabet in official use throughout the world, particularly in African countries. Many of the African languages need extra letters or combining accents. This font supports (only) Lingala.

4.1 Lingala (parts of the Congos, Angola, Central African Republic)

This is a tonal language, using accents: no accent for default low tone, acute accent for the high tone, circumflex for descending tone, caron for ascending tone

5 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "... " but in good text there are variations and this font supports:

left and right single quotes ‘...’	guillemets «...»
left and right double quotes “...”	angle quotes <...>
single turned comma,	corner brackets 「...」
with right single quote ‘...’	white corner brackets 『...』
double low 9, left double quotes „... “	

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
