

FreeFarsi (FreeFarsi.ttf from fonts-freefarsi 1.0.0 beta1)

This font covers Arabic, Farsi and Pashto, but not Urdu nor Uyghur. It has the regular latin alphabet but lacks suitable quotation marks for that. For variations of the latin, cyrillic, and greek alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using X_YTeX and fontspec. Depending on the font, missing glyphs will be replaced either by nothing at all (occasional fonts do that), a blank space, an empty box, or some other symbol indicating a missing glyph.

2 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use `“...”` or `„...“` but in good text there are variations but this font only provides:

guillemets «...» and angle quotes <...>
