

Zen Kaku Gothic New (ZenKakuGothicNew-Medium.ttf downloaded 2024/10/31)

This Japanese sans font covers Japanese, some European languages using Latin alphabets, and Russian. For Catalan it omits the precomposed l with middle dot and for Dutch it omits the ij digraph.

Zen Kaku Gothic New is intended for high legibility. There is also an Antique family with more historically-focussed forms. I think that their differences are confined to the Kana glyphs.

For variations of the Latin alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

For Japanese Kanji ('Han' ideograms) it is impossible to know exactly which codepoints you are likely to encounter. For Chinese and Japanese I have started by assuming that older fonts are probably adequate for common usage and so I have ignored coverage of CJK Extension B and later when trying to determine if a font is likely to be adequate.

I am primarily concerned with informal postings online where you might, for example, see a question-mark in Japanese (more formally, a ka preposition indicates a question so no question mark would be used), but I have tried to estimate which items might be found in more formal texts, and to note which codepoints from the Base Modal Plane I have noticed are missing. This font has 6716 Kanji but omits three (U+7486, U+7E11, U+8843) used in the selected paragraphs of the bxjalipsum package which I use to test the coverage of Japanese.

CJK languages use an ellipsis codepoint to shown omissions or tailing -off in speech. The codepoint is ideally placed at mid-level (most old CJK fonts do that if they do not cover non-English Latin languages), but in Unicode 14 the mid-level ellipsis (a mathematical symbol) was recommended for this purpose. Before that, Japanese fonts tended to ignore that mathematical symbol because it was not in the JIS tables of glyphs. This font provides low ellipses for both codepoints, which seems to be acceptable for Japanese text.

This document was prepared using X<sub>Y</sub>L<sup>A</sup>T<sub>E</sub>X and fontspec. Missing glyphs will be replaced by a blank space.

The Zen fonts have a range of weights: regular, medium, semibold, bold and black but in black-on-white there is not very much difference between them. Here I am using the medium weight for normal text, and bold for bold text.

This font lacks the OpenType tags 'hani', 'cyril' needed to use polyglossia for CJK or Cyrillic scripts.

## 2 Cyrillic Alphabet

### 2.1 Russian

## 3 CJK scripts

### 3.1 Japanese

As well as the 3 missing codepoints I mentioned above, this font lacks white lenticular brackets, white tortoiseshell brackets and white square brackets, all of which are uncommon in horizontal text, and the double hyphen used in translated hyphenated names.

すべての人間は、生まれながらにして自由であり、かつ、尊厳と権利とについて平等である。人間は、理性と良心とを授けられており、互いに同胞の精神をもって行動しなければならない。

## 4 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use ‘...’ or ”...” but in good text there are variations and this font supports:

left and right single quotes ‘...’	angle brackets <...>
left and right double quotes “...”	double angle brackets «...»
single turned comma, with right single quote ‘...’	corner brackets 「...」
double low 9 and left double quotes ”...”	white corner brackets 『...』
guillemets «...»	
angle quotes <...>	

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
