

AR PL New Kai (odokai.ttf from opendesktop-fonts-1.4.2)

This Chinese Serif font supports English, and Simplified Chinese. The Cyrillic glyphs are too widely-spaced and the Greek glyphs are similarly spaced, oblique, and omit iota with diaeresis.

There is also an odokai-ExtB font which only covers basic latin (ASCII) and one CJK Extension B glyph, U+28468.

Kai is a 'regular' or 'official' style, typically used for official documents.

This has a few accented Latin letters needed to show the tones in Pinyin (汉语拼音方案 in Simplified).

For languages not using the Latin, Cyrillic, or monotonic Greek alphabets I merely display the digits if not common 0..9, and Article 1 of the UDHR (that is traditional!).

Missing glyphs will be replaced by a blank space.

This font only has a normal style in a regular weight. It lacks the OpenType tag 'hani' needed to use polyglossia for CJK scripts.

1 CJK scripts

1.1 Simplified Chinese

人人生而自由，在尊严和权利上一律平等。他们赋有理性和良心，并应以兄弟关系的精神互相对待。

2 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "...". but in good text there are variations and this font supports:

left and right single quotes	‘...’	guillemets	«...»
	‘...’	angle quotes	<...>
left and right double quotes	“...”	angle brackets	<...>
	“...”	double angle brackets	«...»
single turned comma,	‘...’	corner brackets	「...」
with right single quote	‘...’	white corner brackets	『...』

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
